LIGHT-DIFFUSING SHEET

Abstract:

Abstract of JP2001324608

PROBLEM TO BE SOLVED: To provide a light-diffusing sheet having higher luminance in the front direction while exhibiting high light-diffusing property from the viewpoint of cost effectiveness without using a prism sheet or the like which is expensive and easily damaged. **SOLUTION:** The light-diffusing sheet 1 produced by laminating a light-diffusing layer 2 containing a binder resin and resin particles and having a rough surface on a transparent supporting body 3 is specified to have $\geq 70.0\%$ transmittance for whole rays, $\geq 80.0\%$ haze and $\geq 25.0\%$ image sharpness for transmission.
